WATERMASTER SERVICE

IN THE CENTRAL BASIN
LOS ANGELES COUNTY

July 1, 2014 - June 30, 2015

May 2016

CENTRAL BASIN
WATER RIGHTS PANEL

Prepared by

Water Replenishment District of Southern California

Central Basin Administrative Body

for the

Central Basin Watermaster Water Rights Panel

Adopted on

May __, 2016

Foreword

Fiscal year 2014-2015 marked the full first year of operations under the third amendment to the Central Basin Groundwater Adjudication (Third Amended Judgment or Judgment). Among other things, the Judgment permits parties holding water rights to store water in the Central Basin for later recovery. This ability to access available storage space, as well as other provisions for increased flexibility, provide the framework for the optimal utilization of the Central Basin to meet the future water demands of the region. Fiscal year 2014-2015 marked the first year that stored water, in addition to adjudicated rights, was extracted from the Central Basin.

The Watermaster structure consists of three separate arms with different functions.

The first arm is the Administrative Body, to administer the Watermaster accounting and reporting functions. The Water Replenishment District of Southern California was appointed by the court to fulfill this role.

The second arm is the Water Rights Panel which enforces issues related to the pumping rights within the adjudication. The Water Rights Panel is made up of seven water rights holders who are selected through election. Current members of the Water Rights Panel are the City of Downey, Golden State Water Company, City of Lakewood, City of Long Beach, Montebello Land and Water Company, City of Signal Hill and the City of Paramount.

The third arm is the Storage Panel which is comprised of the Water Rights Panel and the WRD Board of Directors, which together approve certain groundwater storage efforts.

This 2014-2015 Watermaster Report, developed by the Administrative Body and adopted by the Central Basin Water Rights Panel, provides information on groundwater extractions, storage accounts, use of imported water and recycled water, replenishment operations, and the budget and finances of Watermaster during the 2014-2015 fiscal year.

Notes

Section II.H of the Judgment contains provisions for the development of a Regional Disadvantaged Communities Incentive Program (RDCIP) that allocates 23,000 acre-feet of storage space for the use or benefit of disadvantaged communities. This storage must be used to benefit Disadvantaged Communities (DAC) within the Central Basin. A DAC is defined as any area that is served by a Water Purveyor and consisting of one or more contiguous census tracts which, based upon the most recent U.S. Census data, demonstrates a median household income which is less than eighty percent (80%) of the median household income for all Census Tracts within the State of California.

This program was developed by the Water Rights Panel during 2014-2015 and approved by the Court in June 2015.

Summary of Pertinent Data

Item	Fiscal Year 2013 - 2014	Fiscal Year 2014 - 2015
Parties to judgment	131	131
Active pumpers	68	66
Active nonparties	3	4
Allowed pumping allocation (acre-feet)	217,367	217,367
Water put into storage	21,277	3,500
Rainfall (inches)	5.00	7.66
Injection at the Alamitos Barrier project (acre-feet) ⁴	4,224	4,710
Spreading operations (acre-feet) ¹	56,022	78,818
Watermaster expenses, total⁵	\$481,636	\$425,700
APA Extractions (acre-feet) ²	200,138	178,982
Storage Extractions (acre-feet)	0	900
Recycled water use by parties (acre-feet)	14,104	12,115
Imported water use by parties (acre-feet) ³	138,295	133,847
Exported water use by parties (acre-feet)	-2,953	-2,830
Total water use by parties (acre-feet)	349,584	323,014

¹ Provisional information from Los Angeles County Department of Public Works.

² Excludes extractions by parties with non-consumptive water use permits and by nonparties.

³ Includes groundwater imported from the San Gabriel Basin.

⁴ Includes injection only on the Los Angeles County portion of the Alamitos Barrier.

⁵ Water Rights Panel \$217,367 + Administrative Body \$208,333.

Introduction

The Central Basin Watermaster Service Area overlies about 227 square miles of the Central Basin (Basin) in southeastern Los Angeles County. Figure 1 shows the location and boundaries of the Central Basin Watermaster Service Area. The Watermaster Service Area is bounded by the Newport-Inglewood Uplift on the southwest, the Los Angeles-Orange County line on the southeast, and an irregular line that approximately follows Stocker Street, Martin Luther King Boulevard, Alameda Street, Olympic Boulevard, the boundary between the City of Los Angeles and unincorporated East Los Angeles, and the foot of the Merced Hills and Puente Hills on the north. Twenty-three incorporated cities and several unincorporated communities are found within the Watermaster Service Area. Groundwater from the Basin provides a substantial portion of the water supply needed by the residents, businesses, and industries in the area overlying the Basin.

More than 60 years ago, groundwater overdraft and declining water levels in the Basin threatened the area's groundwater supply and caused the intrusion of sea water into the southern part of the Basin. However, timely legal action and adjudication of the water rights halted the overdraft and helped to prevent further damage to the Basin. Since that time, groundwater extraction from the Basin is limited to the amounts set by a Superior Court Judgment and is monitored by a Court appointed Watermaster.

The Watermaster assists the Court in the administration and enforcement of the provisions of the Judgment. Among other duties, the Watermaster monitors extractions and reports significant water-related events in the Basin to the Court and to the parties to the Judgment. The activities of the Watermaster are key components for the effective management of the groundwater resources of the Basin.

This report, which is required by the Judgment, summarizes the activities of the Watermaster, the conditions of the groundwater supply, and the quantities of water used in the area overlying the Basin and for the replenishment of the Basin; it also includes a financial report for the 2014-2015 fiscal year.

Water Use

A. Allowed Pumping Allocation Extractions by Parties

The Judgment limits the amount of groundwater each party may extract annually from the Basin. This limit, referred to as the Allowed Pumping Allocation (APA), is shown in Table 1 for each party. A recipient of Exchange Pool water may pump the amount released to it in addition to its APA. The volume of water extracted from most wells is reported monthly. Appendix A lists, by party, the volume of groundwater extracted each month from each active well in the Basin. Figure 1 shows the pattern of groundwater extractions during 2014-2015.

To provide flexibility in the control of groundwater extractions, the Judgment contains provisions allowing each party to carry over into the succeeding administrative year a portion of its unused APA and in some cases to over extract. This flexibility was necessary to meet unforeseen water demand.

One provision allows each party to carry over from one administrative year to another any unused APA. For 2014-2015, the amount of carryover available to each party was the greater of i) 40% of its APA or 20 acre-feet, whichever is larger, less the quantity of water in a party's storage account or ii) 20% of a party's APA. In addition, any unused Exchange Pool water can be carried over into the following fiscal year.

B. Groundwater Storage Activity by Parties

The Third Amended Judgment permits parties holding water rights to store water in the Central Basin for later recovery. During 2014-2015, 3,500 acre-feet of water was put into storage, 899.49 acre-feet was extracted and none was transferred.

All of this 3,5000 acre-feet of stored water was put into storage pursuant to Section III.A.(2) of the Judgment, which allows parties to convert carryover to storage upon payment of the Replenishment Assessment to WRD.

C. Overextractions

The Judgment provides for overextractions under certain conditions. A party may over extract by 20 percent of its APA or 20 acre-feet, whichever is greater. When a party overextracts in violation of the Judgment, Watermaster notifies the party to resolve the overextraction issue. Under certain circumstances, a party may overextract in a greater amount; however, prior approval must be obtained from the Watermaster. The overextraction must be made up in the following

administrative year unless Watermaster concludes that to require the party to make up the overextraction would create an unreasonable hardship for the party. In such cases, Watermaster may grant relief from the requirement that the party must make up the overextraction in the following year, such as prorating the reduction in the party's APA over a period of up to five years.

Table 7 lists the names of parties that have over extracted groundwater during the year and shows the amount of overextraction by each party. During 2014-2015, nine parties had a combined overextraction of 24,405.01 acre-feet. The table also identifies one party, State of California (CalTrans), that has over extracted in violation of the Judgment. Since 1997-1998, CalTrans has been pumping groundwater for dewatering beneath the 105 freeway in Downey. CalTrans extracted 474.33 acre-feet in 2014-2015, resulting in a cumulative overextraction of 23,851.40 acre-feet as of June 30, 2015.

D. Extractions by Nonparties

Table 8 shows extractions by nonparties totaled 6.80 acre-feet. Extractions by nonparties are shown by well and by month in Appendix A.

E. Extractions of Contaminated Groundwater

Any party may petition the Water Replenishment District of Southern California (WRD) for a Non-consumptive Water Use Permit (NCWUP) as part of a project to remedy or ameliorate groundwater contamination. If the petition is granted, the party may extract the groundwater without the production counting against its production rights. Table 9 lists current Non-consumptive Water Use Permits issued by WRD and the amounts of groundwater extracted under those permits during 2014-2015.

F. Allowed Pumping Allocation Transfers

Each year, APAs are transferred between parties through sales and leases. Appendix B shows the succession of APAs in the Basin as of June 30, 2015. Sales have reduced the number of parties from 508 in 1966-1967 to 131 in 2014-2015.

Table 10 shows transfers of APAs through leases and Table 11 shows transfers of APA through sales and purchases. During 2014-2015 there were nine sales of APAs that totaled 2,814.00 acre-feet and 71 leases that totaled 32,416.75 acre-feet. Each party's APA, as of June 30, 2015, is also shown in Table 1.

When land is sold on which a water right has been developed, the Watermaster must be furnished a copy of the sale document if the water right is also sold. The water right does not pass to the new land owner unless the sale document specifies that the water right was sold with the land. For the proper accounting of the water right, the sale document must specify the exact amount of water

right.

In transferring water rights, parties must specify (1) the type of right (i.e., APA, normal carryover, or drought carryover), (2) the amount of right to the nearest 0.01 acre-foot, and (3) the period of the lease, if applicable. Moreover, all leases must be made on a fiscal year basis and must be executed by the parties and received by Watermaster by June 30 of the year in which the lease is effective. For parties wanting to buy, sell, or lease water rights, Watermaster maintains a web page. Any party wishing to be listed should call the Watermaster. This is a courtesy to assist parties unable to resolve problems regarding a surplus or deficiency of water supply. Watermaster will make no recommendation regarding transactions conducted relative to the use of this service.

G. Storage Transfers

The Judgment provides for the transfer of stored water between parties. There were no transfers of stored water during the 2014-2015 fiscal year.

H. Exchange Pool

The Judgment authorizes an Exchange Pool to provide additional water rights to parties without sufficient water. If a party's estimated water requirement for the following fiscal year exceeds its total available water supply, that party may request additional water from the Exchange Pool. Any party wishing to purchase water from the Exchange Pool must file the request with the Watermaster before April 1. If no requests are received by April 1, the Exchange Pool will not operate in the following fiscal year, and Watermaster will not process Exchange Pool forms. Table 12 shows that there were no requests for Exchange Pool water during 2014-2015.

I. Status of Extraction Wells

In the Basin there are 311 reported active extraction wells and 213 reported inactive extraction wells (Appendix A). The locations of the active extraction wells are shown on Figure 3. Table 13 shows no new extraction wells were completed. Table 14 shows that ten extraction wells were destroyed.

J. Meter Testing Program

Accurate measurement of groundwater extractions is essential for the successful management of groundwater in the Basin. Therefore, Watermaster requires an operative water meter to be installed at each extraction well. It is the responsibility of each party to ensure that its meter and test facilities are installed properly and are maintained in good working condition. It is the goal of Watermaster to test the water meter at each active extraction well at least once every two years or when a party requests a meter calibration. Watermaster tests meters by volumetric or pitot comparisons. Watermaster notifies a party that it must repair or replace its meter when the meter

registers beyond 5 percent accuracy. Watermaster calculates the monthly water production for each well using the meter readings and Unit of Measure Code reported for the well that month. If the registration accuracy of the meter deviates by as much as 10 percent, the calculated well production could be subject to revision.

During 2014-2015, the Department of Water Resources, under contract with the Central Basin Water Rights Panel, visited 57 parties and tested 216 meters. Tests showed that no meters were more than 5 percent fast or slow. The meter at 1 site was found to be inoperative.

Water Supply

A. Precipitation

Because layers of materials of low permeability overlie the primary water-producing aquifers throughout much of the Basin and largely impermeable surfaces (i.e., pavement and buildings) cover most of the forebay areas, precipitation over the Basin has relatively little direct influence on the replenishment of the groundwater in the Basin. However, during years of high rainfall, increased runoff from the areas upstream of the Basin would result in increased replenishment to the Basin and would probably result in decreased water demand by the water users overlying the Basin which, in turn, could result in lower rates of groundwater extraction from the Basin.

During 2014-2015, the following amounts of precipitation were measured at five precipitation stations: 6.55 inches at La Mirada, 8.70 inches at Montana Ranch, 7.13 inches at Whittier City Hall, 8.53 inches at USC, and 7.38 inches at Imperial Yard. Note that data for the 96th and Central station is not included in the 2014-2015 report due to a gap in the data. Figure 2 shows the locations of these precipitation stations, and Figure 3 shows the monthly average of the rainfall measured at these stations. Based on the rainfall measured at these stations, the mean precipitation over the Central Basin was 7.66 inches, which is 55 percent of the long-term mean precipitation at these stations.

B. Groundwater Recharge

Natural replenishment of the groundwater in the Basin is largely from surface flow and underflow through Whittier Narrows from the San Gabriel Valley. As mentioned above, little of the rainfall over the Basin would be likely to infiltrate into deeper aquifers of the Basin.

Intentional replenishment of groundwater in the Basin is accomplished by spreading water at the Rio Hondo and the San Gabriel River spreading grounds in the Montebello Forebay (Figure 2). The sources of this replenishment water include local storm runoff, and recycled water from three reclamation plants located upstream of the Basin. Table 15 shows the sources and quantities of water spread to replenish the groundwater.

C. In-Lieu Replenishment

During the 1965-1966 water year, WRD, in cooperation with the Metropolitan Water District of Southern California (MWD), began an in-lieu replenishment program. WRD may contract with any producer having access to supplemental water that could be used in lieu of extracting groundwater from the Basin.

The use of supplemental water in lieu of pumping groundwater does not change a party’s water right, but it counts as water pumped under the Judgment. The program may be used to (1) alter pumping patterns within the Basin, (2) replenish the groundwater in areas of low transmissivity where conventional recharge techniques are ineffective, (3) heighten the effect of injecting water to form a sea water barrier by reducing extractions, (4) reduce the amount of replenishment water purchased by WRD, and (5) reduce the annual extractions from the Basin. Table 16 shows that the City of Long Beach participated in the in-lieu replenishment program.

D. Imported Water

Water is imported from northern California via the State Water Project and from the Colorado River and is made available to water users by MWD through its member agencies: Central Basin Municipal Water District (CBMWD) and the Cities of Compton, Long Beach, and Los Angeles. The City of Los Angeles also imports water from the Owens River-Mono Basin, and the California Domestic Water Company, the San Gabriel Valley Water Company, the Suburban Water Systems, and the City of Whittier import groundwater from the San Gabriel Valley groundwater basin, which lies to the northeast and upstream of the Basin. Table 17 shows that in fiscal year 2014-2015, a total of 133,847 acre-feet of water was imported to the area overlying the Central Basin. In addition, the Water Replenishment District of Southern California (WRD) purchased 18,515 acre-feet of spreading water from the Metropolitan Water District of Southern California.

E. Quality of Imported Water

Constituent	Colorado River Water⁴ (mg/L)	State Water Project Water⁵ (mg/L)
Chloride	85	86
Sulfate	226	64
Hardness (as CaCO ₃)	286	129
Total Dissolved Solids	596	339

⁴ At Lake Mathews - from 2014 MWD Annual Water Quality Report

⁵ At Castaic Lake - from 2014 MWD Annual Water Quality Report

F. Recycled Water

Table 18 shows that 12,779 acre-feet of recycled water were used in the area overlying the Basin during 2014-2015. This amount is 2,123 acre-feet less than was used in 2013-2014. These amounts do not include the recycled water used to replenish groundwater in the Basin.

G. Exported Water

California-American Water Company exported 2,830.09 acre-feet of groundwater from the Central Basin to its service area that overlies a portion of the West Coast Basin.

H. Alamitos Seawater Intrusion Barrier Project

Sea water intrusion in the Alamitos Gap near the mouth of the San Gabriel River poses a threat to the groundwater in the Central Basin. The Alamitos Barrier Project is designed to prevent sea water intrusion into the fresh water aquifers of the Basin. The location of the barrier is shown on Figure 2.

The Los Angeles County Department of Public Works operates the barrier project, which is comprised of four extraction wells that can be used to create a groundwater trough and 43 injection wells that create a groundwater ridge to halt sea water intrusion. In addition, the project includes 220 observation wells that are used to monitor groundwater levels and quality in the area. Table 20 shows the quantities of imported water and of recycled water injected into the barrier wells and the quantity of water extracted. The sea water intrusion problem has been contained by the barrier project.

I. Groundwater Levels

Figure 2 shows the locations of selected wells that are used to monitor groundwater level elevations. Figure 4 shows the water level elevations in key wells located in the Montebello forebay, and Figure 5 shows the water level elevations in wells perforated in the principal water producing aquifers in the Basin.

Watermaster Administration Costs and Budget

The Watermaster budget for 2014-2015 was \$425,700. This amount is composed of the Water Rights Panel budget of \$217,367 and the Administrative Body budget of \$208,333. A summary of the 2014-2015 budget is provided in Table 21.

¹ See Table 10, Table 11, and Appendix B for information concerning leases, transfer of water right entitlement, or prior ownership. Leases with flex include carryover provisions.

² Allowable Extraction = Allowed Pumping Allocation + Carryover + Leases.

³ Balance = Allowable Extraction - In-Lieu - Carryover Conversion.

⁴ Includes 2,814.00 acre-feet of increased extraction (pursuant to Section IV(K) of the Central Basin Judgment).

⁵ Carritos 2013-2014 Carryover adjusted from 1,286.79 acre-feet shown in 2013-2014 Watermaster Report to 1,156.03 acre-feet due to a 2012-2013 pumping adjustment of 130.76 acre-feet.

Total				24,405.01	

¹ Overextraction = Allowable Extraction - Amount Pumped.

² Judgment allows overextractions computed as 20 acre-feet or 20 percent of the Allowed Pumping Allocation plus leases with flex, whichever is greater.

³ Includes production by Caltrans for dewatering under the 105 Freeway in Downey.

⁴ Violation of Judgment.
